

Getting Started:

Gene Expression Profiling

- 1) Please contact one of the Core Directors Robin J. Leach, Ph.D. (leach@uthscsa.edu) or Carolina Livi, Ph.D. (livi@uthscsa.edu) to schedule a consultation and obtain a job quote.
- 2) Gene expression bead arrays are available for several animal models. We can inquire about availability and pricing.
- 3) In order for the core to order arrays priced more than \$2,000, a Statement of Work needs to be completed and signed.
- 4) RNA samples are submitted to the core as described in the [Sample Submission Guidelines](#). A spreadsheet for sample information is available.
- 5) At the time of sample submission, an estimated time of project completion will be assigned.
- 6) Data in the appropriate electronic file format will be returned to the client, along with any unused RNA and cRNA or cDNA probe.
